

Figure 1: A 4x4 grid of scatter plots showing the relationship between 'Age' and 'Survival' for different cancer types. The columns represent 'Age' (0, 1, 2, 3) and the rows represent 'Survival' (0, 1, 2, 3). The data points are color-coded according to the legend on the right, which lists 15 cancer types: Adipocytic, Bladder, Breast, Cervix, Colon, Esophagus, Glioma, Hematopoietic, Kidney, Liver, Lung, Melanoma, Ovary, Pancreas, and Prostate.
